Enang Wisdom (Weezie)

Product Designer & Product Lead | Design Systems, AI Experiences & Automation

Abuja, Nigeria | Open to relocation to San Francisco

enangweezie@gmail.com | weezie.site | github.com/weezie001

PROFILE

Product designer since 2023 and full-stack builder since 2025, combining an artistic foundation with product direction and technical delivery. Lead design and product work from ideation, client onboarding, user flows and sitemaps to Figma prototypes, reusable systems, implementation and handoff. Portfolio spans AI-assisted commerce, an art marketplace pilot, business automation, booking experiences, financial-reporting prototypes and brand-led websites. Bring hands-on experience designing complex states, mobile navigation and interfaces connected to application logic.

EXPERIENCE

Lead Designer & Product Manager | Independent projects and client work
2023 - Present | Abuja, Nigeria

- Shape product concepts into user journeys, information architecture, wireframes and interface designs; carry decisions into interactive prototypes and implementation.
- Lead client onboarding and translate requirements into coherent flows, visual systems, reusable components and handoff documentation.
- Define typography, color, layout and interaction patterns across customer experiences and operational dashboards, with attention to feedback, recovery and accessibility.
- Since 2025, extend design ownership into frontend and backend development, connecting interfaces to authentication, payments, email services, data stores and automation workflows.

FEATURED PRODUCT DESIGN

ARTEEC | Art marketplace and creative community
arteec.app | Hosted pilot | Repository: Arteec

- Developed a design system and screen-coverage map connecting 33 original wireframes to reusable components for artist, buyer, organiser and moderation journeys.
- Implemented mobile bottom navigation and an overflow sheet alongside desktop navigation; documented touch targets, focus, contrast and reduced-motion guidance.
- Built connected artwork submission, review, profile, enquiry and private-goal workflows, with contextual empty, loading, success and error states.
- Maintained specifications, staged prototypes, component documentation and implementation boundaries as the product progressed toward its connected pilot.

HEIS KITS | AI-assisted sportswear commerce
heiskits.com | Repository: He-is--kit

- Designed and implemented catalogue, product-detail, size-selection, cart, checkout and order-management experiences in React and TypeScript.
- Built virtual try-on around photo upload, size confirmation, generation feedback, usage quotas, error recovery and downloadable results.
- Integrated image-generation services with cached results and model choices documented around image quality, cost and response-time constraints.
- Connected customer and merchant journeys to welcome, password-reset, order-confirmation, shipping and cancellation email workflows, plus administrator notifications.

CORE CAPABILITIES

Product ideation and direction; user flows and sitemaps; Figma prototyping; interaction and visual design; component libraries and semantic tokens; mobile web patterns; client onboarding; documentation and handoff; AI experiences; coded prototyping; workflow automation.

AUTOMATION, AI & BUSINESS OPERATIONS

PadUp Creations | Commerce and operational handoff
padupcreations.com | Repository: padup-creations

- Built a Next.js/TypeScript storefront with product discovery, cart, checkout, order tracking and entry points into the existing office portal.
- Implemented a signed Paystack webhook that filters storefront payment references and forwards paid orders to the office portal for processing and notifications, with a fallback order-desk email path.
- Replaced an unconnected sign-in form with a direct portal handoff; source documentation records distributor sign-in difficulty as the reason for the change.

Weezie CRM, AI Lab & Client Intake | Business workflow tooling
weezie.site | Repository: weezie-portfolio

- Built prospect workflows covering CSV import, personalized drafts, message review, batch sending and follow-up tracking using Cloudflare, D1 and Brevo integrations.
- Implemented a scheduled outreach worker that selects a pending prospect, uses saved or template-generated copy, submits the message and records the result.
- Connected incoming email to the CRM inbox, with automatic reply/opt-out status updates and notification alerts linking back to the inbox.
- Built website-audit and project-brief AI interfaces with input validation, running/result states, payment verification and access to generated deliverables.

Portfolio Doctor | Automated portfolio-analysis prototype
Repository: portfolio-doctor | Demo / mock-data implementation

- Built an ingest-to-analysis-to-report pipeline covering concentration, funding costs, idle assets, drawdown scenarios and prioritized findings.
- Presented financial data through a web audit interface and self-contained HTML reports with a health-score gauge, plain-language explanations and print styling.
- Implemented a JSON API and x402 payment-handshake demo with explicit mock-mode boundaries; documented remaining exchange, model and settlement integrations.

BotTask Escrow | Agent-work settlement interface
Repository: bottask-escrow | BOT Chain testnet

- Built a four-lane board for open tasks, submitted proof, payment and refunds, translating contract states into task cards and available actions.
- Added wallet connection, confirmation prompts, transaction-pending feedback and explorer links to communicate settlement progress.

Realty Lead Pipeline | Lead-management and follow-up prototype
Repository: realty-lead-pipeline

- Developed dashboard, qualification, pipeline, chatbot, follow-up and analytics interfaces, with backend routes for lead records and follow-up sequences.
- Modelled capture, qualification and demo-scheduling triggers; implemented sequence execution and record creation, with incomplete pipeline/status persistence remaining in prototype scope.

Maxi Innovation & ISP Automator | Automation service communication
Repositories: maxiinovation; isp-automator-

- Created an AI-services website explaining lead qualification, nurture and booking propositions for real-estate and construction businesses.
- Built an interactive ISP automation concept covering requirements, architecture and implementation roadmap to make technical dependencies easier to review.

COMMERCE, BOOKING & TRANSACTION EXPERIENCES

ASH.CO | Streetwear storefront and merchant tools
ash-co-silk.vercel.app | Repository: ash.co

- Built a Next.js storefront with a streetwear identity, light/dark themes, product browsing and self-service merchant interfaces.
- Designed cart, delivery details, inline validation and confirmation as a connected flow; recorded orders before handing buyers to WhatsApp for confirmation and delivery.

MonopolyKeys / Tycoon Club | Digital-key commerce
Repository: monopoly-tycoon-club

- Implemented a digital-key storefront with cart, Stripe checkout, receipt-based delivery, customer dashboard, membership and loyalty workflows.
- Connected purchase states to inventory reservation and payment verification, with key access gated until payment is confirmed.
- Adapted an existing storefront visual reference; contribution centres on implementation and transaction workflows.

Puff N' Paint II | Event ticketing and customization
Repository: puff-n-paint

- Built a branded ticket-purchase experience with tier selection, a 60-design canvas gallery, custom reference upload and full/split-payment options.
- Connected Paystack checkout with reservation and email workflows, including post-payment event details and ticket capacity rules.

SpagKing | Menu discovery and ordering
spag-king.vercel.app | Repository: Spag-king

- Designed a food-brand experience spanning the landing page, full menu, product selection and persistent cart.
- Implemented WhatsApp checkout, mobile navigation, scroll reveals and reduced-motion handling to connect visual storytelling with an ordering journey.

StratifyHub / Starhub | Booking and account experiences
Repositories: client-booking; starhub

- Built booking, account, payment-instruction and administrator interfaces across two related implementations.
- Created shared navigation and modal patterns for reviewing booking information, entering details and understanding pending confirmation states.
- Prepared setup documentation covering the client-booking application, database and service configuration.

CertVerify | Academic credential-verification project
certverify-eta.vercel.app | Repository: certverify | Sepolia demo

- Portfolio project covering a public certificate-code lookup, institution interfaces, document hashing and Ethereum-based verification.
- Connects a web interface and backend services to a Sepolia certificate registry, presenting verification as an accessible lookup workflow.
- Repository credits Hassan Blessing Sudir's final-year project; included with attribution rather than as independently authored academic work.

TECHNICAL TOOLKIT

React; TypeScript; JavaScript; Next.js; CSS; Tailwind CSS; Vite; Node.js; REST APIs; tRPC; Git/GitHub; Cloudflare Workers and D1; Vercel; Paystack; Stripe; Brevo; Resend; AI image-generation integrations. Backend implementation complements product design through data, state and integration literacy.

DESIGN SYSTEMS, BRAND & WEB PORTFOLIO

Weezie UI & Brand Delivery Kit | Reusable design resources
Part of weezie-portfolio

- Created 35 React components with usage examples, an interactive gallery, design tokens and integration guidance across navigation, forms, pricing, search and motion.
- Developed brand applications across social graphics, stationery, presentations, editable artwork and developer tokens, with discovery and handoff materials.
- Built a customizable brand gallery and export workflow; sample applications demonstrate the system rather than representing a separate client engagement.

Weezie Brand Design System | Visual foundations
Repository: design-system

- Documented color, typography, layout, stroke and shape tokens in a browsable brand-system reference.

ESPEFAWIS | Agro-allied corporate website
espefawis.com | Repository: ESPEFAWIS

- Built a React/TypeScript business website with service and commodity content, gallery, contact routes, WhatsApp enquiries and page-level search metadata.

B&D Renovations | Service discovery and estimate prototypes
Repositories: B-D-RENOVATIONS-; bd-renovation

- Created service, process and multi-step quote experiences across two related implementations; translated design mockups into reusable React/TypeScript layouts.
- Implemented semantic color tokens across two themes. Estimate submission remains simulated in the reviewed versions.

Luxury Interior Design | Portfolio and quote experience
Repository: luxury-interior-design

- Built project-discovery, booking and quote interfaces with inputs for property type, budget, location, style and additional services.

EK Construction | Construction-company web design
Repositories: EK-CONSTRUCTION; EK-CONSTRUCTION-I

- Created related versions of a construction website using consistent typography, color and layout to organize service and project information.

YnR | Streetwear brand website
Repository: ynr

- Created a responsive streetwear presentation with expressive typography, a restrained palette and motion-led brand elements.

Early Art Portfolio & GitHub Profile | Personal creative presence
Repositories: my-portfolio; weezie001

- Built an early art portfolio and maintained a GitHub profile presenting capabilities, project links and contact routes; these support the wider portfolio rather than representing client engagements.

EDUCATION

Federal University of Technology, Minna
B.Tech, Urban & Regional Planning | 2020 - 2026 | Graduated

PORTFOLIO COVERAGE

Includes all 26 repositories accessible in the connected GitHub account, grouping related versions by project. Work spans client-facing sites, independent products, reusable design resources and labelled prototypes or testnet demonstrations.
