Enang Wisdom (Weezie)

Product Designer & Product Lead

Abuja, Nigeria | Open to relocation to San Francisco

enangweezie@gmail.com | weezie.site | github.com/weezie001

PROFILE

Product designer since 2023, with full-stack development experience since 2025. Leads ideation, user flows, Figma prototyping, design systems, implementation, and handoff. Combines visual craft with React/TypeScript development across an art marketplace pilot, AI-assisted commerce, and customer-facing products.

EXPERIENCE

Lead Designer & Product Manager | Independent projects and client work
2023 - Present | Abuja, Nigeria

- Lead ideation, client onboarding, user flows, sitemaps, interface design, prototyping, and handoff across commerce, booking, lead capture, and service-business projects.
- Since 2025, extend design ownership into full-stack implementation, connecting customer journeys to cart-to-order flows, payment feedback, account access, and administrative interfaces.

SELECTED PRODUCT & DESIGN WORK

ARTEEC | Art marketplace and creative community pilot
arteec.app

- Developed a product design system linking 33 original wireframes to reusable components, screen states, and interaction specifications across artist, buyer, organiser, and moderation journeys.
- Implemented mobile-specific navigation with a bottom bar and overflow sheet, alongside desktop navigation; documented touch targets, keyboard focus, contrast, and reduced-motion guidance.
- Built connected workflows for artwork submissions, review, profiles, enquiries, and private goals; distinguished live pilot capabilities from planned AI and checkout features.

HEIS KITS | AI-assisted sportswear commerce
heiskits.com

- Designed and implemented shopping journeys across catalogue, product details, size selection, cart, checkout, and order management in React and TypeScript.
- Built the virtual try-on interface around photo upload, size confirmation, generation feedback, error recovery, usage quotas, and downloadable image results.
- Connected the customer interface to AI image generation and commerce services; project handoff documents model-quality versus response-time constraints and generation caching.

Weezie UI & Brand Delivery Kit | Reusable design resources
weezie.site

- Created a library of 35 React components with usage examples, design tokens, integration guidance, and an interactive gallery covering forms, navigation, pricing, search, and motion.
- Developed reusable brand applications and handoff materials spanning social graphics, stationery, presentations, editable artwork, and CSS/JSON tokens.

SKILLS

Product UI and interaction design; user flows; wireframes; component libraries; semantic design tokens; mobile web patterns; coded prototyping; brand systems; Figma; React; TypeScript; JavaScript; Next.js; Tailwind CSS; Git/GitHub; AI image-generation interfaces.

EDUCATION

Federal University of Technology, Minna
B.Tech studies, Urban & Regional Planning | January 2020 - Present
